Clay mini houses for LED lights

Read the full guide before you begin. Use this worksheet to record your own measurements, quantities and choices.

SUPPLIES TO CHECK

Air-dry clay, paper wall pattern, rolling tool, suitable craft knife, enclosed LED lights

01 PLAN

Make a plain-paper prototype with four short walls and a removable roof. Check the LED light fits without force and that the light maker permits use inside a decorative enclosure. If not, use the house without illumination.

02 DETAILS

Roll even clay panels following the maker's directions. Cut broad windows with plenty of material between openings. Join or dry panels only using a method the clay maker supports; keep the roof removable.

03 FINAL CHECK

Allow full drying and curing before use. Never use a candle, hot bulb or exposed battery. This concept is decorative; use lighting only when permitted by both material and light manufacturers; inspect for cracks and skip illumination if the fit or instructions are uncertain.
