Craft-fair QR price-tag holders

Read the full guide before you begin. Use this worksheet to record your own measurements, quantities and choices.

SUPPLIES TO CHECK

Cardstock, printer, real tested QR code, stable tag holder, phone for scan checks

01 PLAN

Choose a short destination that works on a phone and create a QR code with the free FigureNook QR tool. Do not put sensitive information into a public code. Print a sample at the intended size.

02 DETAILS

Keep clear space around the code and high contrast between the code and background. Add a readable product name and price separately so buyers are not forced to scan for basic information.

03 FINAL CHECK

Test the actual printed code with more than one phone at the stall's normal viewing distance and light. Put the card in a stable holder. The pin image is a layout concept; use your own tested code on the final tag.
