195-piece Halloween candy: compare cost per planned serving

A bag-cost and serving-allocation worksheet; no universal serving recommendation. Use the free worksheet with the steps below. Compare the optional supply only if you need it.

Materials: Wrapped mixed candies; guest list; pen

1. Check before starting

Confirm the listing's stated count and actual varieties. Write the number of guests you plan to serve.

2. Plan the arrangement

Choose an allocation appropriate to your own event, multiply it by guests and compare with the pack count. Keep a separate reserve.

3. Finish and review

If comparing costs, divide your actual purchase total by the number of planned servings. That is your event calculation, not a nutritional serving recommendation.

Check actual ingredient labels and allergens for each candy.

195 is a planning example; check the actual package count.

Your printable workspace

Sketch your layout or compare the exact options

Guest count _____

Pieces per visitor _____

Reserve _____

Planned pieces = guests x chosen allocation + reserve

Stated pieces

Guests and allocation

Actual cost per planned serving

Record actual dimensions, contents and maker directions. The illustration is a concept, not an exact product photograph or hands-on test.
