A fog-and-light party photo corner: draw the floor plan before setup

Photo-corner footprint planner with manufacturer ventilation and clearance checks. Download the matching printable below, then use the three-step plan. The featured product is optional.

Materials: Dashsafe 800W Fog Machine, Black A1, 13-colour LED effects; fluid sold separately (optional featured product); Free matching FigureNook PDF; Paper and a pen; The actual item instructions and measurements

1. Start with the real item

Read the machine and fluid instructions before planning any effect. Check permitted location, ventilation, clearances and local venue rules.

2. Use the matching plan

Use the floor-plan worksheet to mark the backdrop, operator position, walking route and equipment. Keep fluid, power and controls consistent with the exact maker directions.

3. Finish and check

Run only the checks the maker permits and avoid effects where they could affect guests or alarms. This layout is not a guarantee that fog effects are suitable for a venue.

Check the exact selected option, maker directions, included pieces, current delivery and return terms before purchase. Other accessories shown may be separate.
