Measure the corner

Measure the panel width, floor footprint and room clearance. Use a stable existing freestanding panel; the ivy is decoration, not structural support.

Plan strands flat

Lay ivy strands against a paper sketch, keeping exits, sockets and moving parts clear. Use separate suitable ties or clips; do not assume mounting hardware is included.

Attach and inspect

Secure light strands without stretching them. Check the panel remains stable and cannot tip or entangle children or pets. Keep well away from heat and open flames.

Important

Artificial foliage is decorative. Use separate suitable supports and fixings where needed, rated for the actual surface and load. Keep small parts, cords and vines away from children and pets, and keep access, ventilation and heat clear. Never use an open flame near foliage.
