Battery tea lights: plan a table layout without covering the controls

Plan light type, holder and control access; no universal safety claim.
Use the printable below and follow the selected product directions.

Materials: Optional battery-operated LED tea lights; check the selected product label.
Printable worksheet, paper and a pen, and the actual product instructions.

1. Start with the real item

Read the light and holder directions. Use the specified battery type, keep button cells away from children, and check access to the controls.

2. Use the matching plan

Draw the table and place paper circles for the lights before adding any decorations. Leave controls accessible and follow the maker's clearances.

3. Finish and check

Trial one real light and holder in the planned position. The diagram does not establish a safe clearance or guarantee unattended use.

Check the exact selected option, maker directions, included pieces, current delivery and return terms before purchase. Other accessories shown may be separate.
