Buying fog fluid? Match the formula and machine first

A machine-fluid compatibility and quantity checklist; compare maker instructions before purchase. Use the free worksheet with the steps below. Compare the optional supply only if you need it.

Materials: Machine manual; fluid listing; comparison worksheet

1. Check before starting

Find the fluid type allowed by your exact machine. Check the exact fluid listing label and bottle size; a listing alone does not prove compatibility.

2. Plan the arrangement

Compare the maker's instructions with the exact fluid label and bottle size. Do not substitute haze fluid, oil-based fluid or homemade mixtures.

3. Finish and review

Record the approved fluid and storage directions before buying. One gallon does not establish runtime because machine output and settings vary.

Follow product and material directions.
