Check an LED tea light against the pumpkin opening

A battery-light footprint and access checklist; use maker instructions. Use the free worksheet with the steps below. Compare the optional supply only if you need it.

Materials: Pumpkin; battery LED light; ruler; paper

1. Check before starting

Measure the light's actual footprint and the pumpkin's access opening before buying a multipack. Check how the battery compartment is reached.

2. Plan the arrangement

Place the light on a stable level surface inside only if its instructions allow the environment and the controls remain accessible.

3. Finish and review

Check the effect in the intended location and switch it off as directed. Use only a battery LED, never substitute a flame in this layout.

Follow product and material directions.
