Glass or plastic for a snack commute?

Weight, size and carrying decision sheet. No purchase or signup required.

Compare the complete carrying load

Weigh or handle a container you already own with its lid and typical food. Glass and plastic sets have different capacities and shapes; the photograph does not establish equal portions.

Measure the commute bag

Record usable internal width, depth and height. Include the ice pack and any inner dip cup when checking how the filled box fits.

Choose by your use

Prioritize manageable weight, a secure closure and the maker's care directions. Pick glass only where its weight and breakage risk suit the journey. A new set is optional.

YOUR PLAN

Material _____

Filled weight _____

Usable size _____

Bag fit _____

Care check _____
