Wrap a small perfume bottle while keeping the label readable

Cut a paper sleeve around the original labeled box, with a window over the product name. Check that complete ingredient information and warnings remain accessible. The worksheet has measurement fields, sleeve and window formulas and a sleeve diagram.

What you need

- The perfume in its original labeled box, with all labels intact
- Wrapping paper, plus scrap paper for a trial
- A ruler, pencil, string, and scissors or a craft knife and cutting mat
- Tape or ribbon, and a separate gift tag

Steps

1. Measure around the item and the label
Use inches for the sleeve and window formulas; divide centimeters by 2.54 first if needed. Measure around the original box with string and measure the name, ingredient and warning labels and their positions.

2. Mark the sleeve and the window
Sleeve length = distance around + 1 in overlap. Sleeve height = the box height, or less if the cap must stay clear. Make the window ½ in wider and ½ in taller than the label, starting ¼ in below the label's lower edge. These margins are FigureNook starting points; adjust them on the trial.

3. Trial on scrap, then cut the final sleeve
Cut a scrap-paper trial. Confirm the product name, complete ingredient information and every warning remain accessible; move or enlarge the window, use a narrow band, or keep the original labeled box available before cutting final paper.

4. Close the sleeve paper to paper
Tape the overlap to itself on the back, never to the label or the bottle, and keep the cap and spray nozzle clear. Tie on a separate gift tag, protect glass in transport and keep the fragrance away from heat and ignition sources.

Tips

- Cut the window with the sleeve lying flat on a cutting mat; a craft knife and ruler give cleaner corners than scissors. Supervise children around blades.
- If you would rather not cut a window, use a narrow paper band that sits clear of the label instead; its height is the gap between the label and the box edge.
- The optional product link is an affiliate link. Check the selected option, size, care directions and current return terms. Other illustrated items are separate.

Your worksheet

Measure

Distance around the original box (inches; use string) _____

Original box height in inches _____

Label width _____

Label height _____

Gap from the bottom edge to the label _____

Sleeve and window

Sleeve length = distance around + 1 in overlap _____

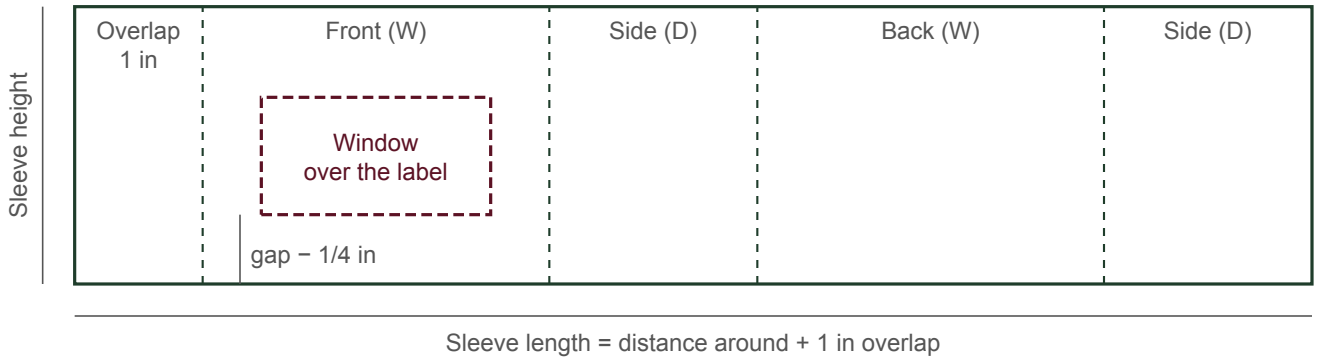
Sleeve height _____

Window width = label width + 1/2 in _____

Window height = label height + 1/2 in _____

Window starts from the sleeve bottom = gap − 1/4 in _____

Dashed lines are fold lines for the original box.



Check before closing the sleeve

- ☐ Trial sleeve cut from scrap paper first
- ☐ Product name readable through the window
- ☐ Complete ingredient and warning labels accessible
- ☐ Tape on paper only, not on the label or bottle
- ☐ Cap and spray nozzle clear
- ☐ Separate gift tag tied on
